

BlackBerry Enterprise Server For Microsoft Exchange

Overview

A component of the BlackBerry® Enterprise Solution, BlackBerry® Enterprise Server is robust software that acts as the centralized link between wireless devices, enterprise applications and wireless networks. Designed to meet the needs of enterprise and government organizations, it provides a proven, secure, open architecture for globally extending wireless communications and corporate data to mobile users.

- **Advanced Security Features** — BlackBerry Enterprise Server delivers end-to-end Advanced Encryption Standard (AES) or Triple Data Encryption Standard (Triple DES) encryption that helps ensure the confidentiality and integrity of wirelessly transmitted information from behind the firewall to wireless devices in the field. With support for more than 450 over-the-air wireless IT policies and commands that enable IT administrators to wirelessly enforce security settings, BlackBerry Enterprise Server meets even the most stringent IT requirements.
- **Simplified Deployment and Management** — BlackBerry Enterprise Server helps increase IT productivity and reduce administrative overhead by enabling centralized control and management, including role- and group-based administration capabilities.
- **Applications** — BlackBerry Enterprise Server is the leading wireless platform for wireless email, Personal Information Management (PIM), instant messaging (IM) and other corporate data. With the majority of customers accessing non-email content while in the field, BlackBerry Enterprise Server is proven in delivering more than email to mobile users.
- **Cost savings** — Leverage your existing investments in applications and infrastructure to maximize your investment and lower your Total Cost of Ownership (TCO). Standards-based protocols and development tools included with BlackBerry Enterprise Server allow you to leverage your existing technology investments.

Microsoft Exchange Enterprise Edition on BlackBerry Enterprise Server

By mobilizing Microsoft® Exchange, your organization can boost business performance by increasing productivity and enabling workers to make timely decisions based on the most accurate information available.

BlackBerry Enterprise Server is the clear choice for the Microsoft Exchange enterprise. It provides push-based wireless access to the following*:

- Microsoft Exchange email
- Microsoft Exchange calendar, contacts and scheduling
