- Improved business optimization
- Affordable protection

h2 Global, Inc.

A Dallas-based consulting firm, h2 Global, Inc., is a McAfee® SecurityAlliance™ partner that provides high-quality and cost-effective technology-based solutions to meet the needs of small businesses in the Dallas/Fort Worth area.

This IT consulting firm is a long-time McAfee security solutions provider that offers McAfee Partner Security Services. Leveraging the functionality of McAfee VirusScan® plus AntiSpyware, Partner Security Services enable h2 Global, Inc., to provide small businesses with the latest online anti-virus and anti-spyware security technology that automatically protects desktops and servers against security threats. A Web-based administrator gives h2 Global, Inc., visibility into its customers' security infrastructure, so the firm can report to them any potential threats associated with unpatched operating systems, potentially unwanted programs, and other forms of malware.

“By providing McAfee Partner Security Services, our small business customers benefit from complete security protection, improved business optimization, and reduced costs associated with managing their anti-virus and anti-spyware protection in-house. With Partner Security Services, McAfee SecurityAlliance partners have the ability to improve existing customer loyalty, expand customer offerings, and remotely manage a greater number of customers simultaneously, using the advanced McAfee technology provided to them free of charge.”

—Rafiq Hoque, principal, h2 Global, Inc.

Through Partner Security Services, h2 Global, Inc., fully manages its small business customers' IT infrastructures with detailed reports that identify virus attacks, vulnerable machines, and other security threats. Partner Security Services lets h2 Global, Inc., manage multiple customers more effectively while alleviating the costs of updating and maintaining anti-virus and anti-spyware definitions. “With Partner Security Services, McAfee SecurityAlliance partners have the ability to improve existing customer loyalty, expand customer offerings, and remotely manage a greater number of customers simultaneously, using the advanced McAfee technology provided to them free of charge,” according to Hoque.

Because information technology (IT) has become an integral part of business today, the growth of a business is usually accompanied by a greater reliance on technology. McAfee and h2 Global, Inc., understand that it is not always cost-effective for a small business to dedicate resources to maintaining its own IT department. By providing McAfee Partner Security Services, h2 Global, Inc., can assume this role so that small businesses are able to focus on what they know and do best—their own products and services.

“McAfee is revolutionary in providing resellers with managed security services opportunities by offering innovative, cost-effective, and automated solutions. McAfee’s Partner Security Services offering, as part of the SecurityAlliance program, is added proof that we are committed to improving partner profitability. As promised, McAfee continues to deliver offerings and services that will empower our partners.”

—David Roberts, senior vice president of North American Channels for McAfee, Inc.

McAfee Managed VirusScan plus AntiSpyware is an affordable online service that provides always on, automatic virus and spyware protection for small businesses that lack the expertise and personnel to implement and manage security solutions for their desktops and servers. Utilizing the same proactive On-Access scanning found in McAfee AntiSpyware Enterprise, McAfee Managed VirusScan plus AntiSpyware immediately detects and blocks unwanted spyware and threats to protect users from compromised data or loss of network bandwidth.

For h2 Global, Inc., McAfee Partner Security Services has improved customer satisfaction and retention, expanded its small business opportunities with McAfee Managed VirusScan plus AntiSpyware, increased protection against competitors that try to get into its small business accounts, and provided its small business customers with an automated, secure environment that addresses all aspects of IT vulnerability from virus threats to user apathy.
